DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 6, 19 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Armanto et al., (Armanto), U.S. Patent No. 6,094,587, in view of Tamura, 2002/0029683.

Regarding claims 6, 19 and 24, Armanto discloses a telephony terminal apparatus (and method and machine readable medium) having a communication unit that transmits a signal to a remote location and receives a signal from the remote location and a music reproduction unit that can reproduce a music piece in association with the signal (**col. 3, lines 35-64 and col. 12, lines 19-34**).

Armanto fails to explicitly disclose wherein the music reproduction unit comprises: a score data memory that memorizes score data representing a music piece; a tone generator of frequency modulation type settable with parameters for generating harmonics by frequency modulation to synthesize a tone a performance controller that sets the tone generator with parameters according to the memorized score data for enabling the tone generator to synthesize tones of the music piece represented by the score data.

In a similar field of endeavor, Kikuchi discloses wherein the music reproduction unit comprises: a score data memory that memorizes score data representing a music piece; a tone generator of frequency modulation type settable with parameters for generating harmonics by frequency modulation to synthesize a tone a performance controller that sets the tone generator with parameters according to the memorized score data for enabling the tone generator to synthesize tones of the music piece represented by the score data (**col. 16, line 43 to col. 17, line 35**).

At the time of the invention it would have been obvious to one of ordinary skill in the art to modify Armanto's programming of a telephone's ringing tone to include score data memory for the purpose of allowing musical score recognition as taught in Kikuchi.

Allowable Subject Matter

3. Claims 1-5,12-18,20-23,25 and 26 are allowed.
4. Claims 7-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter: prior art of record fails to explicitly disclose memorizing timbre data corresponding to a predetermined number of timbres and interpreting the score data to read out timbre data corresponding to a timbre designated by the score data from the timbre data memory. Also prior art of record fails to explicitly disclose detecting when a

setting the tone generator with a variable parameter according to the retrieved score and for detecting a vacant are in the score data.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Makelaet al., U.S. Patent No. 6,501,967, discloses defining of telephone's ringtone.

Yoshino, U.S. Patent No. 6,308,086, discloses a portable cellular phone with custom melody ring setting capability.
